

DYNAMIC FREQUENCY SELECTION

DFS Test Report

APPLICANT : DT Research Inc.
EQUIPMENT : WLAN Module
BRAND NAME : DT Research Inc.

MODEL NAME : 600B

FCC ID : YE3600B

STANDARD : FCC Part 15 Subpart E

CLASSIFICATION: (NII) Unlicensed National Information Infrastructure

The product was received on Dec. 15, 2012 and completely tested on Dec. 25, 2012. We, SPORTON INTERNATIONAL INC., would like to declare that the tested sample has been evaluated in accordance with the procedures and shown the compliance with the applicable technical standards.

The test results in this report apply exclusively to the tested model / sample. Without written approval of SPORTON INTERNATIONAL INC., the test report shall not be reproduced except in full.

1.6 Applied Standards

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

- FCC Part 15 Subpart E
- FCC OET Order 06-96A (2006)
- FCC KDB 905462
- FCC KDB 848637 (client device without radar detection capability)

Remark:

1. All test items were verified and recorded according to the standards and without any deviation during the test.

2 Requirements and Parameters for DFS Test

2.1 Applicability of DFS Requirements

EUT is a slave device and operates in client without radar detection function.

Table 1: Applicability of DFS Requirements Prior to Use of a Channel

	Operational Mode			
Requirement	Master	Client Without Radar Detection	Client With Radar Detection	
Non-Occupancy Period	Yes	Not required	Yes	
DFS Detection Threshold	Yes	Not required	Yes	
Channel Availability Check Time	Yes	Not required	Not required	
Uniform Spreading	Yes	Not required	Not required	
U-NII Detection Bandwidth	Yes	Not required	Yes	

Table 2: Applicability of DFS requirements during normal operation

	Operational Mode			
Dogwiroment		Client	Client	
Requirement	Master	Without Radar	With Radar	
		Detection	Detection	
DFS Detection Threshold	Yes	Not required	Yes	
Channel Closing Transmission Time	Yes	Yes	Yes	
Channel Move Time	Yes	Yes	Yes	
U-NII Detection Bandwidth	Yes	Not required	Yes	
Client Beacon Test	Yes	Yes	Yes	

SPORTON INTERNATIONAL INC.

TEL: 886-3-327-3456 FAX: 886-3-328-4978 FCC ID: YE3600B Page Number : 9 of 25
Report Issued Date : Jan. 17, 2013
Report Version : Rev. 01

2.2 Interference Threshold values, Master or Client incorporating In-Service Monitoring

Maximum Transmit Power	Value (see notes 1 and 2)
≥ 200 milliwatt	-64 dBm
< 200 milliwatt	-62 dBm

Note 1: This is the level at the input of the receiver assuming a 0 dBi receive antenna.

Note 2: Throughout these test procedures an additional 1 dB has been added to the amplitude of the test transmission waveforms to account for variations in measurement equipment. This will ensure that the test signal is at or above the detection threshold level to trigger a DFS response.

Report No.: FZ2D0508-01

The radar *Detection Threshold*, lowest antenna gain is the parameter of Interference *radar DFS* detection threshold, The Interference *Detection Threshold* is the (-64dBm) + (0) [dBi]+ 1 dB= -63 dBm.

SPORTON INTERNATIONAL INC.

TEL: 886-3-327-3456 FAX: 886-3-328-4978 FCC ID: YE3600B Page Number : 10 of 25
Report Issued Date : Jan. 17, 2013
Report Version : Rev. 01

2.3 DFS Response requirement values

Parameter	Value
Non-occupancy period	Minimum 30 minutes
Channel Availability Check Time	60 seconds
Channel Move Time	10 seconds See Note 1.
Channel Closing Transmission Time	200 milliseconds + an aggregate of 60 milliseconds over
	remaining 10 second period. See Notes 1 and 2.
U-NII Detection Bandwidth	Minimum 80% of the 99% power bandwidth See Note 3.

Note 1: The instant that the *Channel Move Time* and the *Channel Closing Transmission Time* begins is as follows:

- For the Short pulse radar Test Signals this instant is the end of the Burst.
- For the Frequency Hopping radar Test Signal, this instant is the end of the last radar Burst generated.
- For the Long Pulse radar Test Signal this instant is the end of the 12 second period defining the radar transmission.

Note 2: The *Channel Closing Transmission Time* is comprised of 200 milliseconds starting at the beginning of the *Channel Move Time* plus any additional intermittent control signals required to facilitate *Channel* changes (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signals will not count quiet periods in between transmissions.

Note 3: During the *U-NII Detection Bandwidth* detection test, radar type 1 is used and for each frequency step the minimum percentage of detection is 90%. Measurements are performed with no data traffic.

SPORTON INTERNATIONAL INC.

Report Version : Rev. 01

2.4 Short Pulse Radar Test Waveforms

As the EUT is a Client Device with no Radar Detection, only one type radar pulse is required for the testing. Radar Pulse type 1 was used in the evaluation of the Client device for the purpose of measuring the Channel Move Time and the Channel Closing Transmission Time.

Radar Type	Pulse Width (µsec)	PRI (µsec)	Number of Pulses	Minimum Percentage of Successful Detection	Minimum Trials
1	1	1428	18	60%	30
2	1-5	150-230	23-29	60%	30
3	6-10	200-500	16-18	60%	30
4	11-20	200-500	12-16	60%	30
Aggregate (Radar Types 1-4)				80%	120

A minimum of 30 unique waveforms are required for each of the short pulse radar types 2 through 4. For short pulse radar type 1, the same waveform is used a minimum of 30 times. If more than 30 waveforms are used for short pulse radar types 2 through 4, then each additional waveform must also be unique and not repeated from the previous waveforms. The aggregate is the average of the percentage of successful detections of short pulse radar types 1-4.

3 Calibration Setup and DFS Test Results

3.1 Calibration of Radar Waveform

3.1.1 Radar Waveform Calibration Procedure

The Interference Radar Detection Threshold Level is (-64dBm) + (0) [dBi]+ 1 dB= -63dBm that had been taken into account the output power range and antenna gain. The following equipment setup was used to calibrate the radiated Radar Waveform. A vector signal generator was utilized to establish the test signal level for radar type 1. During this process there were no transmissions by either the Master or Client Device. The spectrum analyzer was switched to the zero span (Time Domain) at the frequency of the Radar Waveform generator. Peak detection was used. The spectrum analyzer resolution bandwidth (RBW) and video bandwidth (VBW) were set to 3 MHz to measure the type 1 radar waveform. The spectrum analyzer had offset -7.1dB to compensate receiving horn antenna gain 9.3dBi and RF cable loss 2.1dB. The vector signal generator amplitude was set so that the power level measured at the spectrum analyzer was (-64dBm) + (0) [dBi]+ 1 dB= -63 dBm. Capture the spectrum analyzer plots on short pulse radar waveform.

3.1.2 Radiated Calibration Setup

3.1.3 Calibration Deviation

There is no deviation with the original standard.

Report Version : Rev. 01

3.2 In-Service Monitoring: Channel Move Time, Channel Closing Transmission Time and Non-Occupancy Period

3.2.1 Limit of In-Service Monitoring

The EUT has In-Service Monitoring function to continuously monitor the radar signals, If radar is detected, it must leave the channel (Shutdown). The Channel Move Time to cease all transmissions on the current Channel upon detection of a Radar Waveform above the DFS Detection Threshold within 10 sec. The total duration of *Channel Closing Transmission Time* is comprised of 200 milliseconds starting at the beginning of the *Channel Move Time* plus any additional intermittent control signals required to facilitate *Channel* changes (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signals will not count quiet periods in between transmissions.

Non-Occupancy Period time is 30 minute during which a Channel will not be utilized after a Radar Waveform is detected on that Channel. The non-associated Client Beacon Test is during the 30 minutes observation time. The EUT should not make any transmissions in the DFS band after EUT power up.

SPORTON INTERNATIONAL INC.

Report Issued Date : Jan. 17, 2013
Report Version : Rev. 01

3.2.2 Test Procedures

- The radar pulse generator is setup to provide a pulse at frequency that the Master and Client are operating. A type 1 radar pulse with a 1us pulse width and a 1428 us PRI is used for the testing.
- 2. The vector signal generator is adjusted to provide the radar burst (18 pulses) at a level of approximately -62dBm at the antenna of the Master device.
- 3. A trigger is provided from the pulse generator to the DFS monitoring system in order to capture the traffic and the occurrence of the radar pulse.
- 4. A U-NII device operating as a Client Device will associate with the Master at Channel. The MPEG file "TestFile.mpg" specified by the FCC is streamed from the "file computer" through the Master to the Slave Device and played in full motion video using Media Player Classic Ver. 6.4.8.6 in order to properly load the network for the entire period of the test.
- 5. When a radar Burst with a level equal to the DFS Detection Threshold + 1dB is generated on the Operating Channel of the U-NII device. At time T0 the Radar Waveform generator sends a Burst of pulse of the radar waveform at Detection Threshold + 1dB.
- 6. Observe the transmissions of the EUT at the end of the radar Burst on the Operating Channel. Measure and record the transmissions from the EUT during the observation time (Channel Move Time). One 12 seconds plot is reported for the Short Pulse Radar Types 1. The plot for the Short Pulse Radar Types start at the end of the radar burst. The Channel Move Time will be calculated based on the zoom in 600ms plot of the Short Pulse Radar Type.
- 7. Measurement of the aggregate duration of the Channel Closing Transmission Time method. With the spectrum analyzer set to zero span tuned to the center frequency of the EUT operating channel at the radar simulated frequency, peak detection, and max hold, the dwell time per bin is given by: Dwell (1.2ms)= S (600ms) / B (500); where Dwell is the dwell time per spectrum analyzer sampling bin, S is the sweep time and B is the number of spectrum analyzer sampling bins. An upper bound of the aggregate duration of the intermittent control signals of Channel Closing Transmission Time is calculated by: C (ms)= N X Dwell (1.2 ms); where C is the Closing Time, N is the number of spectrum analyzer sampling bins (intermittent control signals) showing a U-NII transmission and Dwell is the dwell time per bin.
- 8. Measure the EUT for more than 30 minutes following the channel move time to verify that no transmissions or beacons occur on this Channel according to KDB848637.

Report Issued Date : Jan. 17, 2013
Report Version : Rev. 01

<20MHz / 5500 MHz> In-Service Monitoring **Channel Closing Transmission Time Channel Move Time** 600ms zoom in 500 points plot (See Note) Date: 24.DEC.2012 21:55:37 Date: 25.DEC.2012 13:43:34 Non-associated test **Non-Occupancy Period** Master was off. (beacon test)

Note:

Date: 24.DEC.2012 23:12:07

Dwell (1.2 ms)= Sweep Time (600 ms) / Sweep Point Bins (500)

Channel Closing Transmission Time (44.4 ms) = Number (37) X Dwell (1.2 ms) < 60ms

Date: 25.DEC.2012 00:55:00

TEL: 886-3-327-3456 FAX: 886-3-328-4978 FCC ID: YE3600B Page Number : 22 of 25
Report Issued Date : Jan. 17, 2013
Report Version : Rev. 01

<40MHz / 5550 MHz> In-Service Monitoring **Channel Closing Transmission Time Channel Move Time** 600ms zoom in 500 points plot (See Note) **%** * Date: 25.DEC.2012 18:29:26 Non-associated test **Non-Occupancy Period** Master was off. (beacon test) * *

Note:

Date: 25.DEC.2012 19:46:03

Dwell (1.2 ms)= Sweep Time (600 ms) / Sweep Point Bins (500)

Channel Closing Transmission Time (44.4 ms) = Number (37) X Dwell (1.2 ms) < 60ms

Date: 25.DEC.2012 20:33:04

3.2.7 Data Traffic and Noise Floor Plots

TEL: 886-3-327-3456 FAX: 886-3-328-4978 FCC ID: YE3600B Page Number : 24 of 25 Report Issued Date : Jan. 17, 2013 Report Version : Rev. 01

4 List of Measuring Equipment

Instrument	Manufacturer	Model No.	Serial No.	Characteristics	Calibration Date	Test Date	Due Date	Remark
Spectrum	R&S	FSP7	101131	9KHz~7GHz	Jul. 23, 2012	Dec. 24, 2012	Jul. 22, 2013	DFS
Analyzer						~ Dec. 25 2012	Jul. 22, 2013	(TH04-HY)
Signal	R&S	SMJ100A	101375	9KHz ~ 6GHz	Feb. 20, 2012	Dec. 24, 2012 ~ Dec. 25 2012	F-1- 40 0040	DFS
Generator							Feb. 19, 2013	(TH04-HY)
Horn Antenna	EMCO	AH-118	071025	1GHz ~ 18GHz	Nov. 19, 2012	Dec. 24, 2012 ~ Dec. 25 2012	N 40 0040	DFS
							Nov. 18, 2013	(TH04-HY)
Horn Antenna	EMCO	AHA-118 071030	4011- 40011-	A 00, 0040	Dec. 24, 2012		DFS	
			071030	1GHz ~ 18GHz	Aug. 09, 2012	~ Dec. 25 2012	~ Dec. 25 2012	Aug. 08, 2013

SPORTON INTERNATIONAL INC.
